### ABSTRACT

This article discusses the content and benefits of using innovative technologies in the educational process in preschool education.

**Keywords:** innovation; similarity, generality, radical innovations, pedagogical processes, efficiency, scientific potential, well-rounded personality, specialization, innovative potential.

### INTRODUCTION

The development, prospects, prosperity, spiritual growth of a country and a society, its place among the most developed countries in the world depend on educated, high intellectual potential, young people with good qualities in their hearts and minds, mature and well-rounded in all respects. It is an honorable and at the same time responsible task for teachers and educators to bring up a selfless, faithful generation that will serve the destiny of the motherland, to raise the quality and content of teaching to a higher level. After gaining independence, the protection of maternal and child health and the spiritual and physical development of the younger generation have been identified as priorities in our country. As soon as a child is born, educating him has become a high goal. Formerly known as a kindergarten, it is now recognized as a pre-school educational institution. In order to bring up the younger generation in a healthy, spiritually and morally harmonious way, special attention is paid to the organization of clubs in the field of foreign languages, sports and art in preschool education. Therefore, one of the main goals is to bring up children with high intellectual potential and fluency in foreign languages.

At present, not only students of schools and universities, but also preschoolers and employees working in various fields are taught foreign languages, in particular, English. There is a reason for this, the study of the languages of scientifically and culturally developed countries is a key factor in the achievement of world science and development.

### REFERENCES AND METHODOLOGY

Innovative process - the creation and adoption of innovations and their effective application in the practice of the educational institution. In the textbook "Functional tasks of heads of educational institutions in the development of professional competence of teachers" authored by S. T. Turgunov, B. X. Daniyarov, D. M. Otajonova, the innovation process is associated with the creation, implementation and dissemination of innovations. Also, innovations in terms of innovative potential; modification innovations related to modernization, improvement of activity, transformation, development; integrated innovations involving the integration of elements of previously known methods into a new system; Radical innovations that do not have similarities and commonalities are defined as the basis for the effectiveness of pedagogical processes.

According to the results of research, the following types of innovations are distinguished:

- Technical and technological (new means of production and new technologies) employees of the institution do not expect any negative developments from these innovations;
- Organizational and management (new systems and methods of team management, new control over activities);
- Socio-economic (new material incentives, remuneration system).

At present, improving the quality and effectiveness of education is determined by the introduction of new forms and methods, new technologies in the educational process. Innovative technologies are pedagogical processes, as well as innovations and changes in the activities of teachers and students, in the implementation of which mainly interactive methods are used. The purpose of the use of innovative technologies used in primary education today is to teach students to think independently, freely, as well as to

acquire modern knowledge and skills. The sages say, "He who is not able to perfect himself cannot be perfect." Therefore, in order to organize the learning process on the basis of innovative technologies, first of all, the teacher must have a deep understanding of modern requirements, master the innovative technologies and know how to apply them in practice. After all, a modern teacher is a creator of the future, the author, researcher, propagandist of new pedagogical technologies.

## RESULTS

Certainly, in preschool education today, innovative technologies are widely used in all classes. Take the English class as an example.

English teachers of preschool age make full use of objects, cards and other textbooks around students through easy teaching methods. When teaching words like banana and apple, teachers can also teach new words that express color at once by pointing to fruits such as bananas and apples. Children are taught to use a foreign language through the objects in the room to organize lessons. Of course, the methodology of teachers plays an important role in the use of materials in teaching. For example, when teaching relevant words, you first show the object to the child and encourage them to speak, students pronounce the words and repeat the new word again using the pictures on the cards to reinforce the word they are pronouncing. is pronounced. When teaching words, teachers will be able to determine the content of the text and the educator will be able to draw the students' attention by drawing the picture on the board by pronouncing the words together with them. The introduction of new pedagogical technologies into the English language education system, the use of interesting methods is bearing fruit. Modern pedagogical technologies are now becoming a necessary and essential component of the educational process for preschool education. The need to use advanced pedagogical technologies in the formation of English as a means of communication in preschool education shows the importance of the effectiveness of interactive methods, the acquisition of the necessary knowledge and skills. Motivation of education plays an important role in the organization of educational activities. It stimulates thinking, critical thinking, and increases the vocabulary of the English language. A powerful motivating factor is the activation of children's interests and abilities in teaching English in preschool institutions, the methods of education that meet their needs in learning new material.

## DISCUSSION

Given that preschool education is the foundation of knowledge, it is important to organize this process in accordance with modern requirements, on the basis of innovative technologies. The organization and conduct of lessons in accordance with new forms and technologies requires an innovative approach to their pedagogical activities.

What is innovation?

Innovation - English innovation means "introduced innovation, invention." Innovation is a goal-oriented change that introduces new and relatively stable elements into a particular social unit - institutions, associations, communities and groups, in general, the spiritual and cultural relations of the people and the socio-economic development of the country. is the introduction of innovations that are inextricably linked with the development?

## CONCLUSION

Nowadays, taking into account personal relationships in the development of children's English vocabulary through interaction, the activities of the teacher and the student group (teacher-student, student-student) necessary. Because group activities have a positive effect on the student. Interaction allows the child to develop communication and communication skills. Teaching language to young children is not an obligation, but a fun activity, and teaching using a number of effective methods is the foundation for their future knowledge. How important it is for children to learn a foreign language in natural conditions should be explained correctly. After all, such education has not yet been consistently developed in any country. Further improvement of foreign languages in preschool education organizations The use of modern pedagogical technologies plays an important role in educating the younger generation.
