Teaching English to preschool and primary school children using innovative technology, intellectual games and interactive methods using unusual principles and pedagogical technologies, overcoming difficulties in learning English and becoming stronger the effective use of innovative technologies in the acquisition of knowledge.

Keywords: information and communication technology, pronunciation, language learning, pedagogical experience.

Introduction

New methods and requirements for foreign language teaching in the country have been developed in accordance with the Recommendations of the European Framework for Assessment of Knowledge and Skills of Foreign Language Teachers (CEFR). According to him, textbooks have been created for students of secondary schools and vocational colleges. In accordance with these requirements, classrooms are equipped with stands and new information and communication technologies. The demand for learning a foreign language is growing day by day. Foreign language science is divided into four aspects (reading, reading, listening comprehension and speaking), each of which provides specific concepts and skills. Educational technology is the effective use of modern information technology in the educational process. It also aims to improve the quality and effectiveness of education through the introduction of modern innovative technologies in the educational process. In particular, there are several advantages to using such information and communication technologies in learning a foreign language. The role of modern technology in language learning and teaching is invaluable. The use of technology is useful in every aspect of learning a foreign language (reading, reading, listening and speaking). For example, to listen and understand, of course, it is impossible to do this process without a computer, player, CDs. Listening is one of the most important parts of language learning. This requires the student to pay attention to the speaker's pronunciation, grammatical rules, vocabulary, and meanings at the same time. After the independence of our country, the interest in teaching foreign languages has grown and many opportunities have been created for young people. As the first President Islam Karimov said, "At present, great importance is attached to the teaching of foreign languages in our country. This, of course, is not in vain. There is no need to underestimate the importance of perfect knowledge of foreign languages for our countries, which today are striving to take their rightful place in the world community, for our people, who are building their great future in cooperation with our foreign partners." As a logical continuation of these ideas, the Presidential Decree of December 10, 2012 "On Measures to Further Improve the System of Teaching Foreign Languages" expanded the opportunities for learning foreign

languages. Today, foreign language skills are becoming an integral part of vocational education. Specialists in various fields have a high level of cooperation with foreign partners, so they have a high demand for language learning. In modern society, foreign languages are becoming an important part of vocational education. Such knowledge is first acquired by people in schools, colleges, high schools, and later in institutes, training courses, or by familiarizing themselves with basic information sets that help them learn a foreign language independently. Today there is a large collection of teaching materials for people with different levels of language skills.

Today, foreign language skills are becoming an integral part of vocational education. Specialists in various fields have a high level of cooperation with foreign partners, so they have a high demand for language learning. In modern society, foreign languages are becoming an important part of vocational education. Such knowledge is first acquired by people in schools, colleges, high schools, and later in institutes, training courses, or by familiarizing themselves with basic information sets that help them learn a foreign language independently. Today there is a large collection of teaching materials for people with different levels of language skills. The use of these tools will make the process of learning a foreign language more interesting and effective for students. Today, interactive games are becoming a tradition in schools. It is well known that a variety of games help students demonstrate their abilities, focus, increase their knowledge and skills, and become stronger. The basics of using gaming technology is an activity that activates and accelerates the learner. According to psychologists, the psychological mechanisms of playful activity are based on the fundamental needs of the individual to express themselves, to find a stable place in life, to self-manage, to realize their potential.² At the heart of any game should be the generally accepted principles and tactics of education. Learning games should be based on the subjects. During the games, the student is more interested in this activity than in a normal lesson and works more comfortably. It should be noted that the game is, first of all, a way of teaching. Students are interested in playful lessons, they strive to win, and the teacher uses them to educate the student. The student is interested in believing that he or she can play, speak, listen, understand, and write in English. We know that in the current educational process, the student must be a subject. Focusing on more interactive methods will increase the effectiveness of education. One of the most important requirements for English lessons is to teach students to think independently. A. Navoi, R. Burns. At the same time, using the words of wisdom they say in class will help young people to become perfect human beings; - The "When pictures speak" method is more convenient and helps to teach English, to develop students' oral speech, it is necessary to use thematic pictures; - Quiz cards are distributed according to the number of students and allow all students to attend classes at the same time, which saves time. As we have seen, each innovative technology has its own set of advantages. All of these methods involve collaboration between teacher and student, active participation of the student in the educational process.³ In short, the use of innovative methods in English lessons develops students' logical thinking skills, fluency, and the ability to respond quickly and correctly. Such methods stimulate the student's desire for knowledge. The student strives to prepare well for the lessons. This makes students active participants in the learning process. As the education system sets itself the task of nurturing a free-thinking, well-rounded, mature person, in the future we will contribute to the further development of effective ways for future teachers to effectively use innovative technologies. possible.
