

APPLYING ADVANCED EXPERIENCES IN ENGLISH LEARNING TO THE LEARNING PROCESS

Zaripova Aziza Shahobiddinovna
Teacher of SamSIFL

Nazarova Nurjahon Bahodirovna
Teacher of SamSIFL,

Annotation: This article is about effective ways of teaching foreign languages to the youth of our country in today's age of information and communication technologies. Also listed below are methods that can be used in educational institutions and as an individual learner.

Key words: information communication, technology, foreign language, English, teaching, student, qualified personnel, pedagogy.

In order to ensure the prospects of the independent Republic of Uzbekistan at the level of world development, major changes are expected in the economic, social, cultural and political spheres. Participating in such global changes requires a high level of knowledge, high culture, spirituality and a broad outlook from our people. To do this, we need to rebuild our education system in accordance with world requirements and eliminate shortcomings in the field of education of future generations. As President Islam Karimov said: "Everything we do today is for the happiness of our children, for their bright future." [9,2-3]

One of the main requirements for every qualified person today is a perfect knowledge of foreign languages. In particular, English is one of the leading languages of international communication, and it is no coincidence that special attention is paid to the study of English. Our country is trying to improve the quality of new pedagogical technologies and information technologies in the education system to be able to fully meet the requirements of today's English language teaching. In today's age of technology, we can't imagine our lives without home appliances. Obviously, each of us has a smartphone and this is nothing new to anyone. Our interest in making the most of the unique opportunities of the Internet is growing day by day. Development and progress can only be achieved when new ideas and technologies are used in teaching English. Each of us can develop an app called Additional Text which can be downloaded to our smartphone. This app contains interesting texts on

different fields and topics, of course these texts are selected according to the level of knowledge of the reader (for example A1, A2, B1, B2 ...). First, the text is read by the app through correct pronunciation, which the reader observes. Words and phrases that are unfamiliar and incomprehensible are highlighted by the reader. This app also includes an interpreter program, which is made up of niwords related to the text. The reader will be able to hear the text over and over again and pronounce it correctly.

This method allows the reader not only to read correctly, but also to speak English fluently and memorize new words. It is important to note that such an approach should not be overlooked in English teaching, as many learning problems can be successfully solved on the basis of such an approach. As the first President Islam Karimov said in his book "High spirituality is an invincible force": We need to educate future great writers, great poets, great creators. "[9,2-3] The whole field and the events that take place will, of course, be seen from the bottom up. This means that young people will be able to speak English from pre-school age. It is known that children of kindergarten age cannot be taught any text. In order to improve their pronunciation, they can watch cartoons in English, sing songs, use various visual aids. it is better to try to pronounce.

Education is rising to a new level, student's worldviews and levels of thinking are expanding, and it is natural that not using innovative technologies in teaching in such a growth process will reduce the effectiveness of the lesson. It should be noted that in any competition, each participant tries to show their skills, but only one of them wins. All this is achieved at the expense of professionalism. Only if the teacher takes a careful approach to his profession, the level of knowledge of students will increase, their interest in science will increase. The XXI century is a century of high technology, and our modern youth is not only in line with the spirit of the times, but also has the ability to use rapidly evolving information and communication technologies and take a new approach. Therefore, it now requires a different approach to the process of educating the younger generation. The role of information and communication technologies in the process of teaching and learning foreign languages is becoming increasingly important. In the line of the President of the Republic of Uzbekistan dated December 10, 2012 "On measures to further improve the system of learning foreign languages" To radically improve the system of educating the younger

generation in foreign languages, training specialists who are fluent in these languages, and on this basis, their extensive use of world development and world information resources, the development of international cooperation and dialogue. Creating the conditions and opportunities for "work and the need to perform a number of tasks that are important for this. Advanced experience in learning English. I have searched some approaches of teaching English. It includes 8 effective methods [2,30-32].

1. Speak English to yourself
2. Run a blog, Instagram, Twitter in English.
3. Use the virtual assistant service.
4. Keep a diary.
5. Listen to an audiobook in English.
6. Learn language through games.
7. Watch English series and movies with subtitles.
8. Sing along with your favorite singer.

In short, to bring up a harmoniously developed generation, to bring them up as a person who will benefit the development of the country - this is to build our future brightly. To step into the bright future, of course, you need to read a lot of books, and to be recognized by the world, you need to learn foreign languages perfectly. After all, the saying "He who knows the language knows the hand" is not in vain. The basis of language learning is structure. Change your habits as we have been taught and you will soon notice its effect. Your vocabulary, pronunciation, and listening comprehension are guaranteed to increase. In addition, these recommendations do not require much time and effort.
