ABSTRACT

In the world of information, the era of the Internet, the rapid development of multi-media information technology such as Internet TV, Internet radio, e-mail, online video, and their audience and influence are developing. There is no need to talk too much. Such information the tools of the young people with a great deal of interest, and from it which is widely used, is really difficult to understand the importance of the matter.

KEY WORDS: Internet, ideological weapon, Dating sites, Manipulation, Information and Communication Technologies (ICT).

INTRODUCTION

Nowadays , Internet users are conditionally divided into two categories can be separated. The first category is based on the demand of the professionor for the purpose of obtaining information and data necessary for scientific research,while those who turn to the internet, the second category is just as interested in impolite, sunbathing dating sites or playing online games. Human manipulates the virtual world. Manipulation it means subjugation to the mind. It is no secret that now some children or teenagers are turning the Internet cafe into their second home. Observations show that online gamers are also mostly teenagers and adults . Adolescence is a peculiar period of physiological and social development of a person. If boys and girls are being intellectual abused online during this period, it is likely to have unintended consequences. In the virtual world, a person's perception of time is compromised and his social activity diminished. This is the reason why you don't notice when your computer is out of time. Therefore, today the Internet covers the potential of all spheres.

Information and communication technologies (ICT) in the first place, The Internet is a factor that directly influences the upbringing of children and adolescents. At the moment 5 million young people in our country the user has their profile on social networks. Moreover 3.6 million use mobile phones to access. According to experts, information technology has become such an integral part of the social structure that it is no longer a technological process but a social process. The economic power of the state, its international influence, and the level of development of democratic institutions are largely dependent on the development of information technology. Information of the society began in the 70s of the last century in the USA and in the 80s in Japan, and on the other continents began the process of realization from the 90s of last century. Introduction of ICT in all systems As a result, the intellectual potential of the society in this area is multiple. According to Marc Verboord and Susanne Janssen “ At the same time, proposals for new operative business strategies are being launched which explicitly incorporate characteristics of online consumption modes, such as ‘collective knowledge’ production (e.g., Wikipedia) or ‘crowdsourcing’ (e.g., www.sellaband.com).¹ It was known that in the United States, about 75% of the workforce is employed in the information industry. In other countries this figure is 40%, and in some countries it is less than 20-25%. The best way to ensure the security of users on the Internet is developing a culture of using. However, cybercrime, ideological and

technical (hacking) violations, which are common in the Internet, the result of users failing to adhere to the Internet culture. Nowadays, the constant, effective and effective pedagogical work of the youth on strengthening the spiritual awakening of the youth, increasing their spirituality, spiritual purity in the mind, education and advocacy. The use of technology is a time requirement. ICT plays an important role in the spiritual development of young people and their education in the spirit of national and universal values. The task of today's requirement is to educate listeners on how to properly use the information they need in the ever-growing information and learning environment. However, developing national resources in the Internet segment of the Internet, improving and providing resources to users, ensuring transparency and security of information, enhancing their ability to protect and use against various external information influence is required.

All the necessary conditions are being created in our country for upbringing a healthy and harmoniously developed generation, acquiring modern knowledge and development, manifesting their abilities and talents. In this process, special attention is paid to the issues of further strengthening the legal protection of the younger generation, their upbringing in the spirit of respect for national traditions and values of our people, and the enrichment of their spiritual world. No one can deny the influence of the media on their upbringing. The peculiarity of the process of globalization is that it can be an instrument of ideological influence. Given what is happening in remote areas today, it is also important to keep in mind that the vicious forces that are used to mislead young people who have not yet formed their minds and lives are using the Internet for their own benefit. So, the intellectual potential and spiritual immunity of young people enhancement of information culture and media development – information.

There is a growing number of people who donate time, money, or health to access computer services. A child who is overly shy and curious at first, will gradually change. From the school, they will stick to the computer and stay out of it for hours. At first, parents are concerned more about staying at home with their parents than watching their child go outdoors. Subsequently, the psychological changes in it will not coincide with adolescence. It seems that human is indifferent, lonely, selfish and arrogant. Unfortunately, there have been many cases of disappointment in recent years. In addition, there are some groups and streams that have become more and more popular in recent times, causing concern to the community, parents, and even employees of the Ministry of Internal Affairs. These groups, often referred to as "death groups" in the media, are usually spread across social networks and involve mainly school-age children. The groups are led by experienced psychologists. In the formation of a human, legal democratic state and civil society, the legal regulation of information and related information is of particular importance. Due to the above, foreign information websites are being popularized among young people. The presence of negative content on the Internet instead promotes attack, extremist and aggressive ideas in the minds of young people, as well as the presence of some of the most abusive sites in the country. In 2007, one million people used the internet, but at the same time they reached ten million two hundred thousand. The fact that the main users of the global network that are becoming a powerful ideological weapon is the younger generation, which requires all of us to be vigilant and to promote a culture of proper use of the Internet. When local sites and portals provide the necessary information If the user fails to do so, he / she should contact the foreign Internet resources natural. Unfortunately, not all foreign sources are the same fair and impartial. The most widespread of these are fictitious materials and the number of such websites has increased by 4.2 million. 38% of the world's youth report violence and violence under the influence of a few more who committed suicide easy learning lessons from over 9,000 sites are learning.

Most discussion on how Internet affects the world of arts and culture apparently concerns the way cultural products are produced and distributed. Illegal downloading is a major concern in the cultural industry: all cultural goods that can be electronically copied (music, film, photographs, books) are increasingly being disseminated without permission of the original cultural producers who consequently suffer loss of revenue (Levine, 2012). Yet also legal ways in which products find their way to audiences (via web stores or intermediary sites such as YouTube or Flickr) affect how the cultural industry as mediators are being sidetracked. Although the disruption of traditional business models in the cultural industries has prompted many observers to signal the start of a completely new era – for the worse or for the better – in many ways there is also continuation of old discussions.

In recent years, there have been more than 7,000 websites promoting the ideas of terrorist organizations. They are engaged in the dissemination of unbiased information that is nationalistic and against the current system of a particular state. Terrorist organizations have 98% of their members on odnoklassniki.ru, facebook.com, mail.ru, twitter.com, Vkontakte growing from social networks such as telegram, whatsapp. According to the UN report 2018, Uzbek people rank among the most numerous nations in the ISHIT. This is certainly not good. As we said earlier, we need to build a culture of internet use at a young age. Developed countries are embracing the culture of Internet use as a separate discipline. They have to be educated. They determine our future, they use a famous phrase: "Our young people know the campus, internet, and so on. Basically, don't you know? A boy sitting on a computer in front of a computer doing something useful five children spend time with unwanted games, clips and the like. What they learned is a theory. Even then there is something important. A student who brought back his death may not be well educated. Because we cannot use all the Internet properly. When using the Internet or social networks, may see a lot of interesting. The advertisements are a lot of experts working on these advertisements, which is why there are so many people who are attracted to the Internet and are misinformed by it. How parents can teach about the culture of using the Internet. Not all parents are intelligent in this society. The president of Uzbekistan Shavkat Mirziyev that emphasizes: "Youth is the future of our future, Attention to youth Focus on the future. If we do not pay attention to the youth today, it may be too late tomorrow". Young people should be deeply embedded in the culture of using the Internet today, not tomorrow, but it may be too late tomorrow.
